

## Production server - Creating a new droplet

When picking the Debian version, just choose the latest 8.x version. When I recorded the video 8.1 was the latest and then 5 days later they updated to 8.2.

Eventually Debian 9.0 will be released, in which case just choose 8.0 or whatever it happens to say for the 8.x release, similar to how it says Debian 7.0 in the recorded video.

**Cat out your SSH public key in preparation to add it to DigitalOcean**

```
cat ~/.ssh/id_rsa.pub
```

[follow the video to see how to add it]
