

Staging server - Setting a static IP address

All commands should be ran from the staging server's VirtualBox VM unless noted otherwise.

Open a terminal in xubuntu and check out your gateway

```
route -n
```

Open a terminal in xubuntu and check out your local IP address

```
sudo ifconfig
```

Check out the staging server's local IP address

```
sudo ifconfig | less
```

Edit the /etc/network/interfaces file

```
sudo nano /etc/network/interfaces
```

[watch the video to see what you need to edit]

[under VirtualBox's Device menu, uncheck the Debian ISO]

Reboot the staging server

```
sudo reboot --reboot
```

Log back into the staging server

<Enter in your login and password>

Confirm the new static IP address

```
sudo ifconfig | less
```

Confirm you can access the outside world

```
ping google.com
```
