# Obtaining an SSL cert - Using your certificates in production

[make the edits in various files by following the video lecture]

**Move into the deploy folder**

```
cd ~/Projects/MobyDock/deploy
```

**Copy the production certificates to the production server**

```
APP_ENV="production" SERVER_IP="x.x.x.x" SSH_USER="root"
KEY_USER="$(whoami)" ./deploy.sh -x
<Replace x.x.x.x with your droplet's IP address>
```

**Move into the nginx folder**

```
cd ~/Projects/MobyDock/deploy/nginx
```

**Commit the changes to the nginx repo**

```
git add -A && git commit -m "Update configuration with real domain
name"
```

**Push the nginx changes**

```
git push production master
```
