Getting setup - Installing additional Docker tools

Install curl because it's not installed by default
```
sudo apt-get install curl
```

Download Docker Compose for xubuntu (Linux)
```
curl -L
```
https://github.com/docker/compose/releases/download/1.4.2/docker-compose-Linux-x86_64 `> /tmp/docker-compose`

Make docker-compose executable
```
chmod +x /tmp/docker-compose
```

Put docker-compose on your system path
```
sudo mv /tmp/docker-compose /usr/local/bin
```

Verify that you can access it
```
docker-compose --version
```
